

## Packing Instructions - Capture Style Shield

---

1. Remove the screws from the handle that has the rocker switch. Be careful not to pull on the wires connecting to the shield. Place the plastic washers onto screws and screw them into the handle (do not over tighten, they only need to be snug enough to stay in place during shipping). Place foam or bubble wrap between the shield and the handle. Use cable ties (use one long one or join several together) to secure the handle to the shield by running them through the holes where the handle mounts, then over the handle. Pull firmly to secure the handle. Repeat for the second handle on the opposite side as shown.

2. Use a bag of packing peanuts or other packing material under the shield to prevent it from being crushed. It is best if the material is long enough to reach from end to end of the box and does not lift the shield.

3. Place the lid on the box. Use packing tape to secure the box, wrap completely around the box a minimum of two time at all 3 places as indicated.
